

TAKING YOUR COMPANY
TO THE NEXT LEVEL

Introducing our next level of probe:

THE AUTOMATIC CALIBRATING PROBE

Specialising in ATG systems

Introduction

Level Master is a completely wireless, state of the art, cost-effective system that can be used to measure the level of wet stock products. This product is Proudly South African.

Level Master system is designed and manufactured in South Africa. It is a wireless, cloud-based system through which the data is accessible from anywhere in the world.

All information is password protected. Easy and quick installation with user training included.

This system is user-friendly and easy to understand.

What we do

We provide customers with the functionality to monitor their wet stock storage tanks in real-time.

Thus enabling the customers to have more control over their sites.

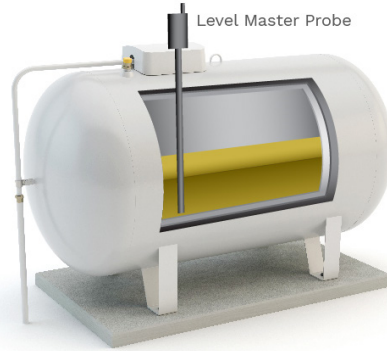

Saving you money and ensuring accurate results.

How does it work?

Wireless sensor transmits level information to transmitter receiver

1

2

Internet cloud stores information from transmitter receiver

Transmitter receiver sends the information to the internet cloud

3

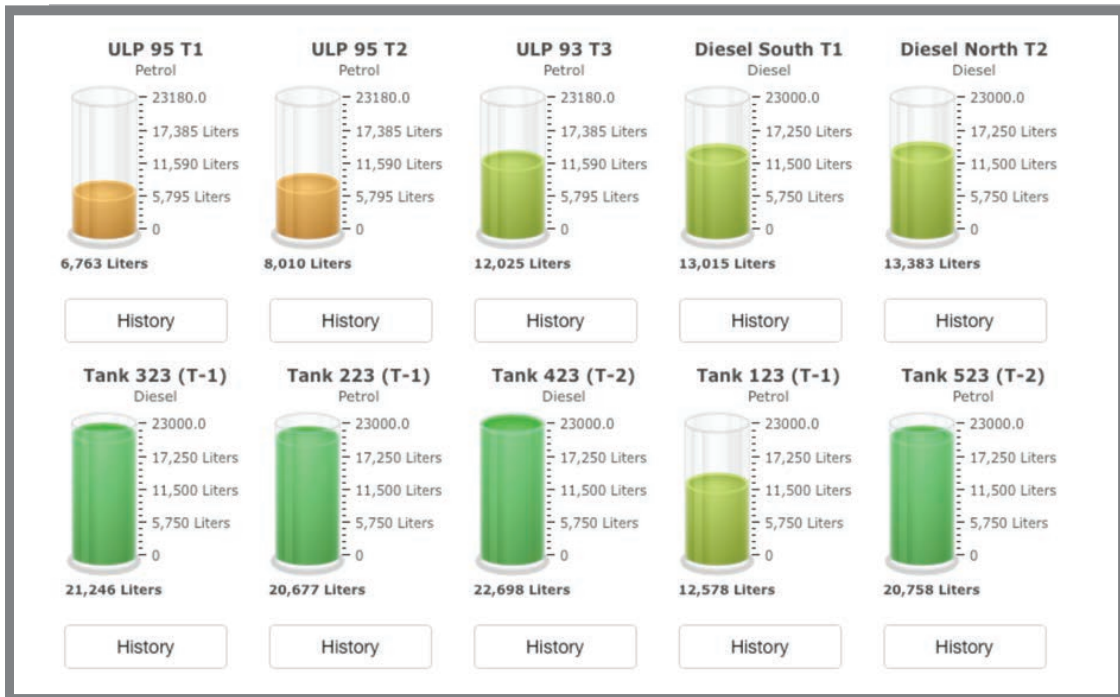

4

Receive information on any internet connected cell phone or computer device

Display software and statistical graph display

CONTAINER OVERVIEW

HISTORICAL DATA

Wireless Fluid Sensor/Probe

- ✓ Wireless sensors installed in each fuel tank
- ✓ No moving parts
- ✓ Transmit signals up to 100m
- ✓ Sensor/Probe goes through an automatic self calibrating process
- ✓ No more dips required from customer to Level Master to perform calibration
- ✓ Battery back-up
- ✓ Durable IRP-65 casing
- ✓ Intrinsically safe. Certificate available
- ✓ Micro process controlled electronics
- ✓ Water detection sensor
- ✓ Fluid temperature sensor

Transmitter Receiver

The receiver can accommodate up to 30 sensors

It processes the information and transmits it to the internet cloud

The receiver works from 220Vac or a solar panel

Why Level Master

Level Master is a cost-effective information system designed to monitor fuel tank levels on a countrywide or global scale with minimal layout costs.

By maintaining optimal wet stock levels, it helps reduce costs and ensures efficiency. Utilizing proven quality products, the system stores all data securely on the cloud with a three-month backup for future reference. Level Master eliminates human error, reduces the occurrence of leftover fuel on tankers, and prevents unauthorized "pirate" deliveries. It offers remote stock volume verification and includes proactive tank level monitoring with alarms to prevent sites from running dry and enhance planning. Additionally, the system supports on-site displays and integrates with third-party supplier software for state-of-the-art ordering systems and optimized distribution loads.

What are the cost benefits?

Low maintenance costs

Low installation costs, no expensive wire installation and no disruption of business

Automatic self calibration of probe

SMS option also available

Need to know what is happening after hours? [Get notified!](#)

- The after-hours time period set by the client determines when SMS will be sent.
- An SMS to the registered cell phone if the tank volume drops below 25% (not determined by the after-hours time period).
- An SMS to the registered cell phone if there is drop or increase in the volume of the tank.
